PROFESSIONAL SUMMARY

Junior Gameplay Programmer pursuing a B.S. in Game Development with experience developing gameplay systems in Unreal Engine and Unity, graphics programming with Vulkan, and scalable backend architecture in Java. Experienced in designing modular systems, render pipelines, and gameplay mechanics through academic, freelance, and personal projects.

SKILLS

Languages	Java, C++, C#
Game Development	Unreal Engine 5, Unity 6, Paper/Spigot API
Graphics	Vulkan, GLSL, Shader Programming, Render Pipelines
Tools	Git, GitHub, Perforce, Jira, Trello, IntelliJ IDEA, Visual Studio, Gradle, CMake
Databases	SQLite, H2, MySQL
Configuration	JSON, YAML, HOCON

EXPERIENCE

Freelance Java Developer

January 2021 - Present

N/A, Port Orange, FL

- Developed numerous custom gameplay plugins for public Minecraft servers and private clients in Java and the Paper API.
- Designed modular plugin architectures, configuration systems, event-driven mechanics, and performance optimizations for long-term maintainability.
- Delivered custom plugin commissions for multiple clients, resulting in repeat development work and positive client relationships.
- Partnered with server administrators to gather gameplay requirements, refine features, and maintain compatibility across updates.
- Managed version control with Git and documented code for ongoing maintenance.

University Student

April 2024 - July 2026

Full Sail University, Winter Park, FL

- Created a CPU software rasterizer and a Vulkan render pipeline while analyzing architectural bottlenecks, memory allocation strategies, and CPU/GPU execution trade-offs.
- Engineered a real-time simulation in C++ utilizing GLSL shaders, accomplishing complex rendering techniques including background starfield shaders and a multi-source dynamic lighting system (directional and point lights).
- Programmed modular gameplay loop mechanics across Unity 6 and Unreal Engine 5, implementing systems with an optimized mix of C++, C#, and visual scripting (Blueprints).
- Worked alongside designers and programmers during rapid game production sprints, driving project milestones in Jira and Trello, and managing asset pipelines via Perforce and GitHub.

CERTIFICATIONS

- Microsoft Office Specialist.
- Adobe Certified Associate.
- Certified Internet Web (CIW).
- Toon Boom Certified Associate.

EDUCATION

Bachelor of Science in Game Development (B.S.)

Full Sail University, Winter Park, FL

July 2026

High School Diploma

Atlantic High School, Port Orange, FL

GPA: 3.8 / 4.0.

June 2022

PROJECTS

Bamboo Prison

- Independently architected a modular prison server framework from the ground up for Paper 1.21 via Java, NMS, and packet manipulation.
- Engineered reusable APIs supporting multiple independent gameplay modules within a shared backend framework.
- Authored packet interception for fake block rendering and schematic visualization without modifying the physical world.
- Integrated SQLite/H2 persistence, configurable YAML/JSON/HOCON systems, and scalable plugin architecture.

Vulkan Voxel Engine

- Built a voxel engine from scratch in C++, CMake, and Vulkan.
- Constructed infinite procedural terrain generation with chunk streaming and multiple level-of-detail stages.
- Established dynamic lighting, custom shaders, collision detection, block interaction, and day/night cycles.
- Created in-engine UI and debugging tools utilizing Dear ImGui.

Robo Run

- Developed core gameplay mechanics including player movement, player input, moving platforms, conveyor systems, and laser hazards.
- Authored a playable level featuring interactive obstacles and environmental challenges.
- Diagnosed and resolved gameplay bugs affecting enemy behaviors.
- Partnered in a five-person Agile Unity development team using Git, Trello, and Discord to deliver a published student project.

Ashen Bloom

- Architected modular inventory, pickup, and consumable gameplay systems in Unreal Engine 5 through C++ and blueprints.
- Implemented a third-person lock-on targeting system and enhanced orbital camera controls.
- Designed interactive loot containers and chests featuring a directional input mini-game unlocking mechanic.
- Created a reusable material function enabling dynamic camera-based dither fading to prevent player occlusion.
- Collaborated within a five-person team in Perforce, Jira, and Discord.

HONORS

Invited to the National Society of Collegiate Scholars.

COMMUNITY INVOLVEMENT

- Reviewed code and mentored developers in Minecraft plugin programming communities.
- Maintained technical documentation and GitBook wikis for released projects.
